

PRESS RELEASE

Vaduz, 09.09.2024

New alliance in the international formwork and scaffolding market

alkus Group and Compoform B.V. announce strategic partnership

The alkus Group and the Dutch company Compoform B.V. have entered into a long-term partnership in the international formwork and scaffolding market. The aim of the alliance is to strengthen and expand both capacities and capabilities in order to optimize the customer offering. To this end, the partners will pool their activities in future.

The agreed cooperation between alkus AG, a renowned manufacturer of the durable alkus® solid plastic formwork panel, and Compoform B.V. - a leading specialist in scaffolding decking, among other things - will create synergies in the areas of production, technology and sales. The combination of the specialized know-how of both partners leads to an expanded product range that offers customers more comprehensive solutions from a single source. In addition to its existing portfolio of formwork panels and accessories, alkus AG will also be distributing a scaffolding panel in the form of the COMPODECK panel. The technologically advanced polypropylene panel is used in all common scaffolding systems. It impresses with its lightweight construction, which saves around 50 percent in weight compared to conventional wooden decks, and is offered with a long-term guarantee of 7 years.

Joint commitment to quality and sustainability

A key commonality between the partners is their commitment to quality and sustainability in the construction industry. Both companies are proud to offer 'Made in EU' products, which ensures the highest quality standards and reliable supply chains. In addition, the products come with long-term guarantees that underline the confidence both companies have in their durability and performance. The partners are also leading the way in the industry when it comes to sustainability in production: alkus AG is already recycling and reusing all production waste in line with zero waste production. Compoform B.V. also has the option of fully recycling its products at the end of their life cycle.

A more sustainable future

Thanks to the strategic alliance, the partners will be able to bundle and expand their commitment in the future. “Our mission is to make the construction industry more sustainable and to make our products widely available on the market,” explains Compoform Managing Director Max Hamm. Michael Tschenett, Managing Director of alkus AG, adds: “Our collaboration is a clear commitment to innovation, quality and sustainability, with the aim of improving efficiency on construction sites and minimizing the industry's environmental impact.”

About alkus AG

alkus AG, based in Vaduz (Liechtenstein), distributes the alkus® solid plastic panel and specially adapted accessories and offers its customers accompanying technical support. Alkus® is used as a formwork panel in the construction industry and trade, where it is a convincing, economical and practical alternative to wood and wood-plastic panels. As it is supplied ready for installation as standard, it fits into any frame and can also be used for tunnel and special formwork or the production of precast concrete parts thanks to its stability and formability. The panel is supplied as standard with a 7-year long-term guarantee and is manufactured exclusively in Europe.
